**Re: Lead and Copper in Drinking Water Sampling
192 Hale St, New Brunswick, NJ 08901.**

Dear Client:

Environmental Testing Services, LLC. provided water testing for lead and copper on January 16th, 2023.

The purpose of this project was to sample the school's drinking water for the presence of lead and copper. Only first draw samples were collected during this inspection. Second draw water testing will be done if the first draw test shows lead and copper amounts exceeding the EPA limit of 15 ug/L for lead and 1300 ug/L for Copper. The locations of each testing location were given to the inspector earlier as to where the use of each water source frequently used.

Samples were collected in 250 ml bottles. Samples were immediately transported to Accurate Analytical Inc., a New Jersey Department of Environmental Protection (NJ DEP) certified laboratory for the analysis of the drinking water.

Based on the findings of the water testing date, the water sources are at acceptable levels in regards to lead and copper

Sample analysis results and the chain of custody are attached to this report. If you should have any questions, please feel free to contact us at (856) 432-4468

Sincerely,

A handwritten signature in black ink that reads "Matt A". The signature is written in a cursive, slightly slanted style.

Matthew Stefkovic,
Risk Assessor

Water Samples and Action Levels

The client was instructed by the inspector prior to the inspection to not to use any water source for at least six (6) hours before the inspection. The water samples were collected in 250 ml bottles. The samples were then transported to EMSL Analytical, Inc., a New Jersey Department of Environmental Protection (NJ DEP) certified laboratory for the analysis of the drinking water.

The Action Levels that are determined from the EPA: "The concentration of lead or copper in tap water which determines whether a system may be required to install corrosion control treatment, collect water quality parameter samples, collect source water samples, replace lead service lines, and/or deliver public education about lead. The action level for lead is 0.015 mg/L or 15 ppb. The action level for copper is 1.3 mg/L or 1300 ppb." **For water**, 1 ppm = approximately 1 mg/L (also written as mg/l) of contaminant in water, and 1 ppb = 1 ug/L (also written as ug/l). A measurement of 6 mg/L is the same as 6 ppm or 6,000 ppb, which is equal to 6,000 ug/L. The results from the lab are given in ug/L.

Results of the sampling found all locations fell below the following thresholds of 15 ppb or 15 ug/L. for Lead and 1300 PPM or 1300 ug/L for Copper with regard to lead and copper.

Wipe Sample	Sampling Location Description	Laboratory Results <u>LEAD</u> (ug/L)	Laboratory Results <u>COPPER</u> (ug/L)	
B1	BOYS BATH L SINK	<2.0 - PASS	84.6 PASS	
B2	GIRLS BATH R SINK	<2.0 - PASS	122.3 PASS	
B3	KIT SINK	<2.0 - PASS	146.0 PASS	
1. The action level for lead is 0.015 mg/L or 15 ppb or 15ug/L. 2. The action level for copper is 1.3 mg/L or 1300 ppb or 1300 ug/L.
